Notices.

3. If, in any case, the Assistant Director of Public Health, Presidency Circle, or the Health Officer, Calcutta Corporation, or any person authorised in writing by either of these officers, considers that the issue of a notice under these regulations is likely to lead to such an amount of delay as might facilitate the spread of cholera, he may forthwith take such steps as he may think fit for carrying out the work; and shall thereafter, as soon as possible, issue a notice on the person concerned stating the reasons why such work has been carried out.

4. If any measure which the Assistant Director of Public Health, Presidency Circle, or the Health Officer, Calcutta Corporation, or any person authorised in writing by either of these officers, has, by a notice issued under these regulations, required to be carried out, be not carried out to his satisfaction within the time stated in the notice, the Assistant Director of Public Health, Presidency Circle, or the Health Officer, Calcutta Corporation, or such person shall be entitled to carry out the measures himself.

Water supply.

13. When the Assistant Director of Public Health, Presidency Circle, or the Health Officer, Calcutta Corporation, or any person authorised by either of these officers, is of opinion that the water of any well, tank, pool or other source of domestic water supply is contaminated or is likely to be contaminated, he may at once take such steps as he deems necessary to close and keep closed such tank, well or pool or may require the owner or occupier of the land upon which such well, tank, pool or source of water supply is situated, to take steps to close the same to the satisfaction of the Assistant Director of Public Health, Presidency Circle, or the Health Officer, Calcutta Corporation, or any person so authorised, within such time as may be specified in the order.

14. Forecast of the Rabi Crops of Bengal for 1944-45.

(*Note.*—On an average of the five years ending 1942-43, the area under summer rice in Bengal has represented some 0·6 per cent. of the total area under rice in India.)

Character of the season.—Sowings generally commenced on normal dates but poor rainfall in the beginning of the growing season retarded growth in most districts. Subsequently the weather condition improved. In certain districts some damage was caused by drought and insect-pests.

Acreage.—The total area sown with different *rabi* (1) food crops and (2) non-food crops dealt with in this forecast is estimated at (1) 3,449,500 and (2) 698,900 acres this year as against (1) 3,408,700 and (2) 706,900 acres respectively last year and against the total estimated normal areas of (1) 3,033,300 and (2) 708,300 acres.

The total food crops acreage this year shows an increase by about 1·2 per cent. as compared with that of last year and the increase under summer rice is about 4·3 per cent. The area under summer rice is estimated to be 540,100 acres this year as against 517,800 acres last year. The area under tobacco is estimated at 299,900 acres this year as against 300,200 acres last year.

Outturn.—According to District Officers' estimates the average outturn of the different *rabi* crops works out to 78 per cent. of the normal this year as against 82 per cent. last year.

Summer rice and tobacco crops.—The average outturn of summer rice (*boro*) for the province works out to 87 per cent. of the normal as against 9[illegible] per cent. last year. The gross yield of the crop on the basis of the normal yield of 13 3/5ths maunds of clean rice per acre is estimated at 234,800 tons this year, as against 243,100 tons last year.

The outturn of tobacco works out to 78 per cent. of the normal as in last year. Taking 1,151 lbs. or 14 maunds as the normal yield of tobacco per acre, the gross yield of the crop for the province works out to 120,300 tons this year as against 120,400 tons last year.

Resolution on the report of the Director of Public Health, Bengal, for the year 1942.

GOVERNMENT OF BENGAL

Department of Public Health and Local Self-Government.

Public Health.

RESOLUTION No. 1119P.H.

Calcutta, the 25th April 1945.

Read the Report of the Director of Public Health, Bengal, for the year 1942.

Vital statistics.—There were 1,448,299 births registered in the year under report as against 1,594,291 in 1941—a decrease of 150,992. The birth rate was 23·93 per 1,000 of the midyear estimated population against 31·9 in previous year. The large difference in the rates of 1942 and 1941 was due to the adoption of the estimated midyear population in calculating the rates of 1942; the rates in 1941 being calculated on the census population of 1931. The number of deaths registered in the Province during 1942 was 1,222,164 as against 1,184,850 in 1941, representing an increase of 37,314. The death rate was 20·19 per mille against 23·7 per mille in 1941, the rate in 1941 being calculated on the basis of 1931 census figures. The highest birth rate of the year (34·8 per mille) was recorded in the district of Birbhum and the lowest (9·4 per mille) in Calcutta. The highest death rate (27·2 per mille) was returned by the district of Darjeeling while the lowest (7·3 per mille) was in the district of Malda. The number of male births per 100 female births was 108·9 during the year against 108·0 in the previous year. Excluding "other classes" the Hindus recorded the highest birth rate of 24·55 per mille and the Muslims the lowest rate of 23·80 per mille. As regards death rate the Muslims showed the highest rate of 21·66 per mille while the Christians showed the lowest rate of 15·48 per mille. There was appreciable decrease in the number of unregistered births and deaths detected during 1942, which were 6,390 and 2,824 as against 7,610 and 3,143, respectively, in the previous year. 330 defaulters under Bengal Births and Deaths Registration Act were prosecuted during the year under review, of whom 193 were convicted, 48 acquitted and 89 were pending trial. The Director of Public Health, Bengal, pointed out in this connection that there was some defect in the registration of births in Calcutta and expressed his hope that the health authorities of the Calcutta Corporation would take proper steps in the matter. During the year under report Sanitary Inspectors were in charge of compilation and transmission of the vital statistical returns of thanas to the District Health Officers in 14 districts while the Subdivisional Officers were responsible for the remaining 12 districts. There was, however, noticed considerable delay in submission of these returns by the District Health Officers and it is expected that these Officers will, in future, take proper steps for regular and punctual submission of correct monthly statistical returns to the Director of Public Health.

Infantile and maternal mortality.—The number of infantile deaths during the year was 2,23,500 (urban 10,064 and rural 2,13,436) against 2,48,226 in 1941, representing a decrease of 24,726. The infantile death rate was 154·3

per mille of live births against 155·7 in the previous year. Compared with the previous year the infantile mortality rate decreased by 0·9 per cent. The number of still births was 53,576 (50,560 in rural areas and 3,016 in urban areas) as against 61,904 in 1941—a decrease of 8,328. The still birth rate was 35·67 per 1,000 births (live and still births). The rate was highest among the Muslims (40·90) and lowest (20·60) among the Christians. 13,503 mothers died as a result of child birth during the year. The corresponding figures for the last 3 years were 15,792, 15,758 and 14,803. A definite improvement was thus noticeable in this direction.

This was the third year of working of the maternity and child welfare scheme to which a reference was made in the resolution reviewing the report for the year, 1940. Altogether 34 maternity and child welfare centres under the above scheme functioned during the year under review. Efforts were also made to bring about uniformity in the working of the different centres under the said scheme. During the year one centre had to be closed down for want of co-operation of the local committee. Nine new centres were started in different parts of the Province.

General Epidemiology—Cholera.—The total number of deaths from cholera during the year under report was 78,391 (3,232 in urban areas and 75,159 in rural areas) with a death rate of 1·3 per mille as against 61,879 deaths in the previous year with a death rate of 1·2 per mille. The quinquennial average death rate from cholera was 0·7 per mille. The mortality from cholera was greater in the rural areas than in the urban areas.

Cholera preventive measures.—All approved anti-cholera measures, including disinfection of the affected houses, wells, tanks and river ghats were adopted to combat the disease. A large number of epidemic doctors, Sanitary Inspectors, etc., with necessary equipments and drugs were deputed to various local bodies to assist them in carrying out anti-cholera measures in the Province. The total number of anti-cholera inoculations performed during the year was 36,78,551, of which 34,37,645 were in rural areas as against 34,82,398 in 1941. During the year under report 40,48,125 c.c. of anti-cholera vaccine was prepared in the Bengal Vaccine Laboratory as against 36,85,100 c.c. in previous year.

Small-pox.—Small-pox was responsible for 4,781 deaths (4,475 in rural areas and 306 in towns) giving a death rate of ·08 per mille as against the quinquennium average rate of 0·2 per mille. The number of deaths from this disease in 1941 was 13,250. The death from small-pox in rural areas decreased from 6,884 to 4,475 and in urban areas from 6,366 to 306 in 1942. Out of the total deaths of 4,781 during the year under review 385 occurred among infants under one year and 1,313 among children between one and ten years.

Small-pox preventive measures.—The total number of persons vaccinated during the year was 60,15,477 (52,86,944 in rural areas) as against 83,69,442 in 1941. Of the total number of persons vaccinated, 64·6 per cent. was male and 35·4 per cent. female. The females were thus less protected than the males. The total number of vaccinators employed in the Province was 2,661 against 2,510 in 1941. The total number of Vaccination Inspectors was 48 during 1942. Two Special Inspectors of Vaccination were also retained by the Public Health Department for organisation of vaccination campaign by local bodies. The ratio of successful vaccination per mille of population was 53·1 or in other words 53·1 per mille of population was rendered immune against small-pox. The percentage of persons successfully vaccinated to total population was 5·31 against 8·7 during 1941. There

was considerable decrease in the number of persons vaccinated during the year and this might have been due to the lesser attention paid by the local authorities in the matter of vaccination and Government cannot but reiterate the urgent necessity on the part of the local authorities of organising an intensive campaign of vaccination according to the programme fixed by Government so as to cover effectively the whole population in the districts.

25,92,520 grains of vaccine lymph was manufactured during 1942 and the average cost of production of vaccine lymph per dose of half a grain was 1·9 pies as against 0·7 pies in 1941.

Fevers.—During the year under report the mortality from "fevers" (which include deaths from diseases of a widely varying character) rose from 732,884 in 1941 to 782,312, the death rate being 12·9 per mille. About 98 per cent. of deaths from fevers occurred in the villages.

Malaria.—There were 426,573 deaths (2,966 in urban and 423,607 in rural areas) from malaria during 1942 as against 388,381 (2,077 in urban and 386,304 in rural areas) in 1941. The Provincial mortality rate was 7·04 per mille. Malaria was responsible for 34·9 per cent. of the total deaths and 54·5 per cent. of the total fever deaths in 1942. The highest death rate of 21·82 per mille was recorded in the district of Pabna while the lowest rate of 0·50 per mille was recorded in the Howrah district. 99·3 per cent. of the total malaria deaths occurred in rural areas thus showing that the problem was mainly rural and that it still remained one of the greatest rural public health problems of the Province.

Kala-azar.—15,230 persons died of kala-azar during the year under report, the death rate being 0·25 per mille as against 16,349 deaths and death rate of 0·33 per mille in 1941. The death rates in urban and rural areas were ·08 and 0·27 per mille, respectively.

The special kala-azar scheme in the district of Darjeeling referred to in the review of the report of 1941 was continued during the year. Grants were also paid for kala-azar work during the year through various affiliated societies.

The Singur and Madhubati special anti-malarial scheme in the district of Hooghly was continued at Government cost. Several municipaplities carried on anti-malarial measures within the municipal areas out of their own funds supplemented by suitable Government grant.

Control measures in connection with anti-ludlowii campaign in the salt lakes area and also in the industrial areas of Budge Budge were continued during the year by the special staff maintained for the purpose.

Enteric fever.—The number of deaths was 8,640 as against 8,948 in 1941.

Influenza.—Deaths registered on account of this disease were 1,607 as against 1,759 in the previous year.

Cerebrospinal fever.—It accounted for 643 deaths as against 955 deaths in 1941.

Typhus fever.—5,358 deaths were attributed to this disease in 1942 in place of 5,640 in 1941.

Blackwater fever.—291 deaths were recorded in 1942 from this disease as against 313 in the previous year.

Respiratory diseases.—There were 72,810 deaths from respiratory diseases in 1942 against 84,647 in 1941. The mortality rate was 1·20 and 1·70 per mille in 1941 and 1942, respectively. The highest death rate of 5·1 per mille was recorded in the district of Jalpaiguri and the lowest rate of 0·1 per mille was in the district of Malda.

Pneumonia.—This disease accounted for 38,277 deaths with a mortality rate of ·63 per mille as against 44,801 deaths in 1941 with a mortality rate of 0·9 per mille. During the year under report there was an appreciable decrease in the number of deaths from this disease which was responsible for 49·9 per cent. of the total deaths from respiratory diseases.

Pulmonary tuberculosis.—This disease took a toll of 11,120 lives with a death rate of 0·18 per mille as against 12,867 lives with a rate of 0·26 per mille in the previous year. The number of deaths from the disease in rural areas was 7,583 and in urban areas 3,537 giving a death rate of 0·14 and 0·63 per mille, respectively. Calcutta with a death rate of 1·07 per mille was responsible for 63·6 per cent. of the deaths recorded in the urban areas.

The tuberculosis surveys at Barisal and Serampore were completed during the year under review. Both these surveys revealed interesting statistical data regarding the incidence of tuberculosis in both industrial and rural areas, which are calculated to be very helpful in formulating the post-war anti-tuberculosis scheme. The Bengal Tuberculosis Association continued to carry on valuable publicity and propaganda work with the usual grant from Government. The work of the Association included:—

(*1*) maintenance of six dispensaries in Calcutta and one in Howrah and three tuberculosis clinics at three mufassil towns;

(*2*) training of health visitors and medical men in tuberculosis work;

(*3*) anti-tuberculosis propaganda through lantern lectures, cinema shows and radio talks.

It was, however, not possible to hold the course of training of the Medical and Health Officers in tuberculosis work, on account of the unsettled conditions of life in Calcutta during the year under report. Training of Home Visitors, which is usually undertaken by the Bengal Tuberculosis Association, could not also be undertaken during the year for the same reason.

Towards the latter part of the year 1942, two Special Officers for Tuberculosis Control, were appointed by Government and they have been entrusted with the work of development of the Provincial Scheme for control of tuberculosis by organising district associations for establishment of chest clinics and village isolation centres and co-ordinating their activities. A provision of Rs. 40,000 was made in the budget for establishment of chest clinics attached to sadar hospitals and village isolation centres but the response from the local bodies was very poor. This indicated lack of enthusiasm on the part of local bodies.

The Jadavpur Tuberculosis Hospital which is the only institution of its kind in the Province received considerable financial assistance during the year. An additional recurring grant of Rs. 20,000 was made to the hospital for maintenance of 20 additional free beds thus raising the number of free beds maintained at Government cost to 30 during the year. A capital grant of Rs. 15,000 was also made to the hospital towards cost of acquisition of land for further extension of the hospital.

The total number of patients treated in the hospital during 1942 was 453, of whom 278 were new admissions.

Whooping cough.—3,068 deaths from this disease were recorded with a death rate of ·05 per mille as against 2,921 deaths in 1941. The rural death rate (0·5 per mille) was considerably higher than that (·01 per mille) of urban areas.

Other respiratory diseases.—There were 20,345 deaths with death rate of 0·34 per mille as against 24,058 deaths with death rate of 0·48 per mille in the previous year.

Other diseases—Plague.—During the year under report not a single death from plague was reported.

Dysentery and diarrhoea.—There were 53,255 deaths with a mortality rate of 0·9 per mille from dysentery and diarrhoea as against 51,529 in the previous year with a mortality rate of 1·03 per mille.

Leprosy.—This disease was responsible for 1,388 deaths (1,335 in the rural areas and 53 in the urban areas) as against 1,596 deaths (1,556 in the rural areas and 40 in the urban areas) in 1941. The percentage of leper deaths in rural and urban areas were 96·2 and 3·8, respectively. There was no death from leprosy in Calcutta during the year under report as in the previous year.

75 leprosy clinics were working in six districts during the year. The following schemes were sanctioned by Government:—

(*1*) Murshidabad district board leprosy scheme for seven centres.

(*2*) Mymensingh district board leprosy scheme for six centres.

Injuries.—The number of deaths from "injuries" was 24,317 (22,355 in the rural and 1,962 in the urban areas) with a death rate of ·40 per mille as against 21,476 in 1941 with a death rate of ·43 per mille. Out of the total deaths, 16,426 were due to wounds and accidents, 3,889 to snake bites, 2,848 to suicide, 418 to rabies, 427 to homicide, and 309 killed by wild animals.

Fairs and festivals.—There were full co-operation between the Public Health Department and the local authorities concerned in undertaking medical and sanitary arrangements for the welfare of the pilgrims and the prevention of outbreaks of infectious diseases in the several important *melas* in the Province, viz., Allowakhowa *mela*, Sitakund Sivaratri *mela*, Langalband *mela* and Sivaratri *mela* at Tarakeswar. The precautionary measures undertaken were in respect of water-supply, conservancy, disposal of refuses, supervision of food-stuff, etc. Necessary public health staff were deputed everywhere for carrying out preventive vaccinations and inoculations. The Gangasagar *mela* was not held during the year under report due to war conditions. Only two persons died of pneumonia in Allowakhowa *mela* and only five cases of cholera were detected in Langalband *mela* but all of them survived the attack. There were no epidemics in any of the *melas*.

Sanitation and water-supply.—The municipal bodies in Bengal spent Rs. 53,16,594 or 40·9 per cent. of their total receipts inclusive of the opening balance on public health work during the financial year 1941-42 showing a decrease of 1·0 per cent. compared with the expenditure of 1940-41. This was to a certain extent attributable to the fact that a considerably higher

expenditure had to be incurred on public safety. The average incidence of municipal taxation per head of population was Rs. 2-7-9 during 1941-42 as compared with Rs. 3-9-3 in 1940-41. The average expenditure on public health per head of population was Rs. 1-8-4 in 1941-42 as against Rs. 2-3-3 in 1940-41. There was thus a considerable decrease of 10 annas and 11 pies per head of population during 1941-42 which was rather unsatisfactory having regard to the fact that the income of the municipal bodies during the year increased by 4·2 per cent. The total expenditures on conservancy, drainage and water-supply were Rs. 26,35,143, Rs. 4,04,655 and Rs. 10,52,274, respectively.

The total expenditure incurred by the district boards in rural areas on water-supply, drainage, vaccination and epidemic charges was Rs. 26,48,619 in 1941-42 against Rs. 24,97,948 in 1940-41 and represented 15·0 per cent. of their total receipts, which decreased by 3·0 per cent. as compared with the receipt of the previous year. The percapita expenditure on public health was 10 pies during the year 1941-42. This showed that better attention was given by the district boards to rural sanitation during the year in spite of the falling off of their income.

The number of union boards during the year was 5,140. The income of the union boards was Rs. 1,00,98,558 in 1941-42 against Rs. 1,01,94,348 in 1940-41. The expenditure of the union boards on water-supply increased considerably to Rs. 7,70,429 from Rs. 5,99,752 in 1940-41. The expenditure on other items of public health, viz., drainage, conservancy, etc., also increased during the year 1941-42. This was no doubt a very happy feature in the administration of local self-government.

29 Health Officers and 112 Sanitary Inspectors were employed in 118 municipalities (excluding Calcutta) in the year 1942 as against 33 Health Officers and 110 Sanitary Inspectors in the previous year. Sanitary Inspectors or Health Officers were not employed in 23 municipalities against 25 in the previous year, the public health work in these municipalities being performed by Sanitary Inspectors of the neighbouring municipalities or district boards.

During the year 1941-42 increased grants were made by Government towards supply of drinking water in the rural areas as in the previous year.

School hygiene.—The School Hygiene Division under the Bengal Public Health Department functioned throughout the year under report. The total number of school-going children examined was 16,635, of which 4,687 were from Calcutta, 7,793 from the other municipal areas and 4,155 from the rural areas. Mal-nutrition, eye troubles, dental caries and enlarged tonsils were found to be the most common ailments. The rural areas had in addition enlarged spleen. All defects or diseases in the boys were brought to the notice of their parents or guardians for proper treatment.

In rural areas the Sanitary Inspectors examined 1,75,420 pupils in 4,901 schools in the year 1942. During the year under review 217 plans for construction of school buildings were examined by the Public Health Department from the public health point of view, of which 135 were approved and 82 were returned for necessary modification.

Almost all the schools arranged for physical training of their students during the year under report. Physical training in girls' schools also received due attention.

Health propaganda.—During the year health exhibitions were held in various parts of the Province. Posters and charts and health models were sent to all the important exhibitions for demonstration.

Miscellaneous.—The normal activities of the Public Health Department were maintained and some measure of improvement was noticeable in a number of directions. Grants-in-aid on the usual conditions were made to local bodies and voluntary associations on account of health welfare services. Besides payment of the usual contribution towards the pay of the Health Officers employed by the local bodies, a sum of Rs. 2,000 was spent by Government for each public health unit in the rural areas maintained by the district boards in each thana. There were 578 such units operating in the year under report. A grant of about Rs. 7 lakhs was distributed for improvement of water-supply in rural areas. The usual grant (Rs. 10,000) was made to each of the Tuberculosis Association, Bengal, and the Bengal Branch of British Empire Leprosy Relief Association. Besides the above, grants for free vaccination, for free distribution of quinine, and for anti-kala-azar measures were continued as in previous years. Mention may be made here particularly of some of the anti-malarial activities of the Public Health Department during the year under review. The Hart Khali khal and Ichamati khal schemes in the Chittagong district were examined and approved by the Director of Public Health. The Singur and Madhubati Anti-malarial Scheme in Hooghly was continued during the year at Government cost. The scheme was carried at under the supervision of the Medical Officer of Health, Singur Model health Unit, and it is gratifying to note in this connection that there was a marked improvement in the health conditions within the unit area, where there were only 152 deaths from malaria and 22 deaths from cholera and no death from small-pox, against 183, 41 and 8 deaths respectively in the previous year.

Special surveys were also undertaken in the districts of Mymensingh, Faridpur and Rangpur in order to establish certain temporary treatment centres to cope with the widespread prevalence of malaria. Anti-ludlowii survey and control measures were also effectively continued in the eastern part of Calcutta, in the salt lakes area and in the industrial area of Budge Budge with the result that incidence of anti-ludlowii was kept low in the year.

Samples of food stuffs and water sent by the district boards and municipalities, jute mills, hospitals and dispensaries, etc., were analysed as usual in the Bengal Public Health Laboratory and it is interesting to note that 73·5 per cent. of the samples of food-stuff received from the district boards and 38·8 per cent. of the samples from the municipalities were of mustard oil, while only 22·5 per cent. of the samples from district boards and 45·9 per cent. from municipalities were of milk and milk products. The analysis revealed that 33·7 per cent. of the samples of mustard oil sent by district boards and 24·1 per cent. of samples sent by municipalities were adulterated. Percentages of adulteration of samples of milk and milk products were, however, greater, viz., 80·3 per cent. in case of samples received from district boards and 70 per cent. in case of samples received from municipalities.

The Nutrition Survey was continued during the year under report in order to determine the nature and extent of mal-nutrition among the students in primary and secondary schools, members of families and labour classes of industrial areas. 2,093 students (1,241 boys and 852 girls) were examined. Besides the students, 478 males, 289 females and 70 infants were examined

during the course of house to house visits by the Nutrition staff. The heads of the institutions and families were informed about the hygienic defects and the remedial measures to remove them. A diet survey was also carried out and the principles of cooking and preparation of balanced diet were impressed upon the people.

General remarks.—The year 1942 was comparatively a better year from the view point of the public health except for the devastating cyclone with high tidal sea bore which ravaged the coastal belt of the Midnapore district towards the latter part of October and brought in its wake famine and pestilence and resulted in the filling of the tanks and *dovas* with saline water rendering them favourable breeding places for the virulent malaria carrying species A. Sundaicus. Although there was an increase in the number of deaths from cholera and malaria, the deaths from small-pox, kala-azar, tuberculosis and other diseases like influenza, enteric fever, typhus fever, etc. recorded appreciable decrease in the year. Deaths due to child birth was also less than those in the previous three years by a considerable number. The Bengal Public Health Asociation with its branches throughout the districts of the Province did much towards the awakening of health consciousness of the people.

Personnel.—Dr. B. Mookerjee held the charge of the Director of Public Health, Bengal, throughout the year under review.

ORDER

No. 516L.S.-G., dated 25th/27th April 1945.

Supersession of the Balia union board in police-station Khargram in the Kandi subdivision of the Murshidabad district, under section 56(1)(b) of the Bengal Village Self-Government Act, 1919.

Whereas I am of opinion, after considering the views of the District Magistrate and the district board, that the union board described above persistently makes default in the performance of the duties imposed upon it under the Bengal Village Self-Government Act, 1919, for the reason that the chowkidars have not been paid for sixteen months up to March 1945, and the clerk of the Board has not been paid for three years, now therefore in exercise of my powers under section 56(*1*)(*b*) of the Bengal Village Self-Government Act, acting with the approval of the Provincial Government, I supersede the Balia union board for a period of one year with effect from 15th May 1945.

I further direct under section 57(*1*)(*b*) and (*c*) of the Bengal Village Self-Government Act, that during the period of supersession all powers and duties of the said union board shall be exercised by the Circle Officer who for the time being is in charge of the Circle in which the union board is situated, and that all property vested in the union board shall during that period vest in the said Circle Officer in the same manner and to the same extent as it vested in the union board before supersession.

4. If any measure which the Health Officer or the Sanitary Inspector or any person authorised in writing by either of these officers has, by a notice issued under these regulations, required to be carried out, be not carried out to his satisfaction within the time stated in the notice, the Health Officer, or Sanitary Inspector or such person shall be entitled to carry out the measures himself.

14. When the Health Officer or the Sanitary Inspector or any person authorised in writing by either of these officers is of opinion that the water in any well, tank, pool or source of domestic water supply is contaminated, he may disinfect it or direct its owner or occupier to disinfect it with such disinfectants as he may specify in such quantities and at such time as he may think fit.
